

ABSTRACT

An image processing apparatus connected with a wireless LAN unit having a USB host controller via a USB interface, which performs data

5 transmission/reception to/from a PC included in a network with which the communication terminal is connected. A data-receiving request is issued to the wireless LAN unit via the USB interface, then, in correspondence with a data-request command sent from

10 the wireless LAN unit in response to the data-receiving request, information related to the network, arranged by input from an operation unit, is transmitted to the wireless LAN unit. Communication with the PC is performed via the wireless LAN unit by using the

15 information related to the network.
